EXECUTIVE SUMMARY

This Traffic Impact Fee Nexus Study describes the methodology and summarizes the results of a study conducted by Iteris, Inc. (Iteris) to update the current Traffic Impact Fee (also known as the Development Impact Fee) Program for the City of Rialto. The purpose of the Traffic Impact Fee is to collect funds for transportation infrastructure improvements aimed to relieve projected mobility deficiencies and unacceptable traffic operating conditions expected to exist as a result of the new developments within Rialto, per buildout of the City's General Plan. This report identifies the purpose of the fee and demonstrates a reasonable relationship ("nexus") between the fee and the purpose for which it is to be collected, thus satisfying the requirements of the California Mitigation Fee Act.

The net final total cost to improve the City's transportation system is estimated at \$72,747,502. The Traffic Impact Fee was calculated by dividing the total costs of the transportation improvements by the 201,369 net daily trips which are projected to be generated by new development within the City by year 2040. The maximum nexus fee as a result of the projected new daily trips is \$361.27 per generated daily trip. This Nexus Fee Study only recommends this maximum fee per trip that by state law nexus is connected to and can be assessed to new development. The staff report, which will be drafted for consideration by the City Council based on the results of this study, will recommend the parameters of the actual updated traffic impact fee program. The final traffic impact fee for a project is typically a one-time fee, calculated prior to project approval, and collected at the time of building permit issuance.

1.0 INTRODUCTION

The purpose of this traffic impact fee nexus study is to describe the methodology used and summarize the results of a study conducted by Iteris, Inc. (Iteris) to update the current Traffic Impact Fee (also known as the Development Impact Fee) in the City of Rialto. The Traffic Impact Fee is intended to collect funds for transportation infrastructure improvements aimed at relieving projected transportation deficiencies and unacceptable traffic operating conditions forecast to be caused by new development within Rialto, per build out of the City's General Plan. This report identifies the purpose of the fee and demonstrates a reasonable relationship (nexus) between the fee and the purpose for which it is to be collected.

1.1 BACKGROUND

The City of Rialto currently administers a regional traffic impact development fee, which was established as part of Resolution 5427, Ordinance 1532. The current fees are as follows:

- Single-family Residential - \$3,533 per dwelling unit
- Multi-family Residential - \$2,448 per dwelling unit
- Retail - \$8.08 per square foot
- Office - \$4.87 per square foot
- Industrial - \$2.80 per square foot

The City must comply with California Government Code Section 66000 and as part of the code, the City is required to make certain findings via a nexus study in order to establish a valid local traffic impact fee.

1.2 CALIFORNIA MITIGATION FEE ACT

New development lays the groundwork for population increases and job opportunities within the City. However, as population and employment increase, the need for planning and implementing circulation system improvements also increases.

California Government Code Section 66000 et seq. enables local agencies to charge a mitigation fee. A mitigation fee, also known as a development impact fee, is a monetary exaction imposed by a government agency upon an applicant seeking approval for a development project. The fee is applied towards the cost of traffic-related public infrastructure improvements within the jurisdiction, and is not a tax or special assessment. The fee is to be used to finance only those circulation system improvements which are related to the type of development that will generate an increase in traffic.

The Mitigation Fee Act requirements in California Government Code Section 66001 require specific nexus requirements to be satisfied for fees related to traffic mitigation improvements. These requirements include:

66001. (a) In any action establishing, increasing, or imposing a fee as a condition of approval of a development project by a local agency, the local agency shall do all of the following:
- (1) Identify the purpose of the fee.
 - (2) Identify the use to which the fee is to be put. If the use is financing public facilities, the facilities shall be identified. That identification may, but need not, be made by reference to a capital improvement plan as specified in Section 65403 or 66002, may be made in applicable general or specific plan requirements, or may be made in other public documents that identify the public facilities for which the fee is charged.
 - (3) Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed.
 - (4) Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed.

Appendix A includes a complete version of California Government Code Section 66000-66008.

2.0 TRAVEL DEMAND FORECASTING

This section presents the methodologies that Iteris applied to develop future traffic conditions for the study area. San Bernardino Association of Governments (SANBAG) is the countywide planning agency responsible for developing and reviewing land use forecasts on behalf of the Southern California Association of Governments (SCAG). The process used to develop land use forecasts involved approval of residential and non-residential development capacities for each specific plan area controlling the growth increments. These specific plan growth capacities were obtained from approved specific plans, through coordination with City staff. Specific plan growth capacities were then allocated to the

Transportation Analysis Zones (TAZ's) within each specific plan area, and based upon each TAZ's proportionate share of acreage as a percentage of the total acreage of each specific plan area.

SANBAG has developed the San Bernardino County Transportation Analysis Model (SBTAM) based on SCAG Regional Transportation Plan (RTP) model. SBTAM analysis years

currently include a base year of 2008 and a horizon year of 2035. The SBTAM was used as a base model in the development of the City of Rialto focused model. The purpose of this section is to present the land use and circulation assumptions of the SBTAM within the City of Rialto.

As part of this fee update study, an updated base year 2012 model scenario was created to supplant the 2008 data currently in the model, using updated land use data obtained from SANBAG. The updated base year model was created in order to more accurately estimate the growth in vehicle trips between current conditions (at the time of the study) and projected buildout conditions. In addition, an updated 2040 model scenario was created to supplant the 2035 data currently in the model. **Table 1** summarizes the calculation of net daily trips using the SBTAM scenarios.

TABLE 1: TOTAL GENERATED TRIPS

Year	Total Daily Trips (All uses)	Total Daily Trips (Non-exempt uses)
Base Year 2012	365,686	323,311
Future Year 2040	589,403	524,680
Net Growth	223,717	201,369

As shown in **Table 1**, the projected total increase in daily trips as a result of new development in the City of Rialto between model years 2012 and 2040 is estimated at 223,717 daily trips. This number represents the total trip difference between City TAZs in the two model year scenarios, and includes contributions from all land uses. Of the net new daily trips, approximately 10% are attributable to public schools (K through 12, and college) which are typically considered exempt from local planning regulations, and thus exempt from paying their share of the traffic impact fee. It is assumed that their share of the fee would be endured by new development. Based on the trips generated by non-exempt uses only, the net projected increase in daily trips to be used in the final trip fee calculation would be reduced to 201,369 daily trips.

2.1 FUTURE VOLUME DEVELOPMENT

Future year forecast volumes, both daily and peak hour, were post-processed consistent with standard methodology applied for forecast volumes obtained from various travel demand models throughout Caltrans District 8. The post-processing methodology compares the existing base year model and future year model forecast volumes and applies the ratio or incremental difference between the forecasts to the existing traffic count volume. This methodology is consistent with methodologies applied by SCAG and other applications of the SCAG regional model.

3.0 TRAFFIC ANALYSIS METHODOLOGY

Intersections are typically considered to represent the most critical locations for traffic flow bottlenecks and general congestion on roadways. Conflicting traffic movements are created at intersections since the right-of-way must be shared by opposing traffic streams. For purposes of this study, intersection level of service (LOS) is measured to determine the peak hour operating conditions at the study intersections. **Table 2** outlines the LOS concept for signalized intersections using the Highway Capacity Manual (HCM) delay methodology, which is described in the Highway Capacity Manual, Special Report 209 (Transportation Research Board, Washington, D.C., 2000). Under the HCM methodology, LOS at signalized intersections is based on the average delay experienced by vehicles traveling through an intersection. The analysis incorporates the effects of the lane geometry and signal phasing (e.g., protected or permitted left turns) at the intersection.

TABLE 2: SIGNALIZED INTERSECTION LEVEL OF SERVICE DEFINITIONS

Level of Service	Description	Signalized Intersection Delay (seconds per vehicle)
A	Free flowing, virtually no delay. Minimal Traffic.	≤ 10
B	Free flow and choice of lanes. Delays are minimal. All cars clear intersection easily.	$>10 \text{ and } \leq 20$
C	Good operation. Delays starting to become a factor but still within acceptable limits.	$>20 \text{ and } \leq 35$
D	Approaching unstable flow. Queues at intersection are quite long but most cars clear intersection on their green signal. Occasionally, several vehicles must wait for a second green signal. Congestion is moderate.	$>35 \text{ and } \leq 55$
E	Severe Congestion and delay. Most of the available capacity is used. Many cars must wait through a complete signal cycle to clear the intersection.	$>55 \text{ and } \leq 80$
F	Excessive delay and congestion. Most cars must wait through more than one on one signal cycle. Queues are very long and drivers are obviously irritated.	> 80

Table 3 outlines the LOS concept for unsignalized intersections using the HCM methodology.

TABLE 3: UNSIGNALIZED INTERSECTION LEVEL OF SERVICE DEFINITIONS

Level of Service	Description	Unsignalized Intersection Delay (seconds per vehicle)
A	Excellent operation. All approaches to the intersection appear quite open, turning movements are easily made, and nearly all drivers find freedom of operation.	≤ 10
B	Very good operation. Many drivers begin to feel somewhat restricted within platoons of vehicles. This represents stable flow. An approach to an intersection may occasionally be fully utilized and traffic queues start to form.	$>10 \text{ and } \leq 15$
C	Good operation. Occasionally drivers may have to wait more than 60 seconds, and back-ups may develop behind turning vehicles. Most drivers feel somewhat restricted.	$>15 \text{ and } \leq 25$
D	Fair operation. Cars are sometimes required to wait more than 60 seconds during short peaks. There are no long-standing traffic queues.	$>25 \text{ and } \leq 35$
E	Poor operation. Some long-standing vehicular queues develop on critical approaches to intersections. Delays may be up to several minutes.	$>35 \text{ and } \leq 50$
F	Forced flow. Represents jammed conditions. Backups form locations downstream or on the cross street may restrict or prevent movement of vehicles out of the intersection approach lanes; therefore, volumes carried are not predictable. Potential for stop and go type traffic flow.	> 50

Source: *Highway Capacity Manual*, Special Report 209, Transportation Research Board, Washington, DC, 2000.

The City of Rialto considers acceptable intersection operations as LOS D or better, applied during the General Plan process.

4.0 EXISTING CONDITIONS

This section presents the existing conditions LOS at the study intersections and roadway segments. Existing deficiencies must be identified and addressed as part of the program, but they cannot be funded by future development, so other funding mechanisms need to be explored to cover existing deficiencies.

The project study area includes fifty (50) key intersections throughout the City, developed in consultation with City staff. Peak hour traffic volumes were collected in May 2014 at 44 of the 50 intersections, with truck classification counts collected at eight of the 44 intersections. For the other six intersections, 2013 peak hour traffic volumes were used. Existing volumes provide a baseline to evaluate current performance of the circulation system and are used as the basis of future forecast volumes through the post-processing routine. **Figure 1** shows the locations of the study intersections.

The existing a.m. and p.m. peak hour traffic volumes are provided in **Appendix B**. **Table 4** summarizes the existing LOS results at the study intersections. Detailed LOS calculation sheets are provided in **Appendix C**.

* SANBAG CMP intersection

Notes:

HCM 2000 Operations Methodology.

LOS = Level of Service, Delay = Average Vehicle Delay (Seconds)

As shown in **Table 4**, the Alder Avenue/Base Line Road intersection is currently operating at LOS E in the a.m. peak hour. By state law, the traffic impact fee is only to address projected future deficiencies and is not intended to collect the full amount of improvements for existing intersection LOS deficiencies. New development would, however, continue to add trips to an already deficient intersection, worsening the traffic operating conditions. A discussion of how improvement costs are calculated for these currently deficient segments, based on the “fair share” portion of future trips only, is provided in Section 7.1.

The following study intersections are currently operating at LOS D:

- Sierra Avenue/Riverside Avenue;
- Ayala Drive/SR-210 Westbound Ramps;
- Cactus Avenue/Base Line Road;
- Riverside Ave/Easton Street;
- Riverside Avenue/Base Line Road;
- Riverside Avenue/Merrill Avenue; and
- Riverside Avenue/Valley Boulevard.

The study area also includes eighty seven (87) key roadway segments throughout the City and the City's Sphere of Influence, developed in consultation with City staff. Existing Average Daily Traffic (ADT) volumes were collected at the 87 segments in May 2014. Consistent with the intersection volumes, existing roadway volumes provide a baseline to evaluate current performance of the circulation system and are used as the basis of future forecast volumes through the post-processing routine.

Since theoretical daily roadway segment capacities can vary between local jurisdictions, the values used in this analysis were developed by comparing capacities in several jurisdictions and using a rounded average value. The following capacities are used in this analysis for City of Rialto segments:

- 2-lane Undivided Roadway (2U) – 13,000 vehicles/day
- 2-lane Divided Roadway (2D) – 17,500 vehicles/day
- 4-lane Undivided Roadway (4U) – 25,500 vehicles/day
- 4-lane Divided Roadway (4D) – 35,000 vehicles/day
- 6-lane Divided Roadway (6D) – 56,000 vehicles/day

Using these theoretical capacities, the existing Volume-to-Capacity (V/C) ratios were evaluated in order to identify deficiencies in the roadway network. For purposes of this analysis, a segment was considered deficient having a V/C ratio of 1.00 or greater. **Table 5** summarizes the existing Volume-to-Capacity (V/C) ratios at the roadway segments.

87	Agua Mansa Rd	Between Riverside Ave and Enterprise Dr	0.43

Notes:

V/C = Volume-to-Capacity ratio

As shown in **Table 5**, the following roadway corridors are currently operating above their theoretical capacities, with a V/C ratio equal to or greater than 1.00:

- Alder Avenue just south of Easton Street/Renaissance Parkway; and
- Ayala Avenue just south of Easton Street/Renaissance Parkway.

Similar to the intersections, by State law, the traffic impact fee is only to address projected future deficiencies and is not intended to be collected to improve any existing roadway capacity deficiencies. New development would, however, continue to add trips to the already deficient segments, worsening the traffic operating conditions. A discussion of how improvement costs are calculated for these currently deficient segments, based on the “fair share” portion of future trips only, is provided in Section 7.2.

5.0 FUTURE YEAR 2040 CONDITIONS

This section presents the future year 2040 conditions LOS at the study intersections and roadways. As part of this scenario, the forecast future year 2040 traffic conditions were evaluated by analyzing 2040 volumes on the current intersection and roadway configurations in order to determine the deficiencies that are directly attributable to new development. Thus, no future circulation improvements have been assumed in the future year 2040 conditions LOS analysis. The future year 2040 traffic volumes were developed using the SBTAM, as described in Section 2.1. The future year 2040 conditions a.m. and p.m. peak hour intersection traffic volumes are provided in **Appendix B**.

Table 6 summarizes the future year 2040 LOS results at the study intersection. Detailed LOS calculation sheets are provided in **Appendix C**.

TABLE 6: FUTURE YEAR 2040 CONDITIONS - INTERSECTION LOS

	Intersection	Traffic Control	AM Peak Hour		PM Peak Hour	
			Delay (sec)	LOS	Delay (sec)	LOS

* SANBAG CMP intersection

Notes:

HCM 2000 Operations Methodology.

LOS = Level of Service, Delay = Average Vehicle Delay (Seconds)

As shown in **Table 6**, the following study intersections are forecast to operate at LOS E or worse in future year 2040:

- Sierra Avenue/I-15 Northbound Ramps;
- Sierra Avenue/Riverside Avenue;
- Alder Avenue/SR-210 Westbound Ramps;
- Alder Avenue/SR-210 Eastbound Ramps;
- Alder Avenue/Renaissance Parkway;
- Alder Avenue/Base Line Road;
- Ayala Drive/I-210 Westbound Ramps;
- Ayala Drive/Renaissance Parkway;
- Cedar Avenue/Base Line Road;
- Cedar Avenue/Foothill Boulevard;
- Cedar Avenue/Rialto Avenue;
- Cactus Avenue/Base Line Road;
- Cactus Avenue/San Bernardino Avenue;
- Riverside Ave/Easton Street;
- Riverside Avenue/Base Line Road;
- Riverside Avenue/San Bernardino Avenue;
- Riverside Avenue/Valley Boulevard;
- Riverside Avenue/I-10 Eastbound Ramps;
- Riverside Avenue/Slover Avenue;

- Riverside Avenue/Jurupa Avenue; and
- Riverside Avenue/Agua Mansa Road.

Using the same theoretical roadway capacities used for existing conditions, the future year 2040 V/C ratios were evaluated in order to identify future deficiencies in the roadway network. **Table 7** summarizes the future year 2040 V/C ratios at the roadway segments.

TABLE 7: FUTURE YEAR 2040 CONDITIONS – ROADWAY SEGMENT LOS

Intersection		Location	V/C
1	Sierra Ave	Between Riverside Ave and I-15 NB Ramps	1.18

86	Riverside Ave	Between Jurupa Ave and Resource Dr	1.38
87	Agua Mansa Rd	Between Riverside Ave and Enterprise Dr	0.66

Notes:

V/C = Volume-to-Capacity ratio

As shown in **Table 7**, the following roadway corridors are currently operating above their theoretical capacities, with a V/C ratio equal to or greater than 1.00:

- Sierra Avenue between Riverside Avenue and I-15 Northbound Ramps;
- Alder Avenue just south of Easton Street/Renaissance Parkway;
- Ayala Avenue just south of Easton Street/Renaissance Parkway;
- Alder Avenue between Base Line Road and Mariposa Avenue;
- Base Line Road between Tamarind Avenue and Alder Avenue;
- Base Line Road between Alder Avenue and Laurel Avenue;
- Pepper Avenue south of Foothill Boulevard;
- Cedar Avenue south of Rialto Avenue;
- Alder Avenue north of Valley Boulevard;
- Cedar Avenue between Orange Street and Slover Avenue;
- Riverside Avenue between Cameron Way and Slover Avenue;
- Alder Avenue between Maywood Street and Santa Ana Avenue;
- Riverside Avenue north of Jurupa Avenue; and
- Riverside Avenue between Jurupa Avenue and Resource Drive.

6.0 TRAFFIC IMPACT FEE PROJECT LIST

The objective of the traffic impact fee is to fund traffic improvements that are needed as a result of new development within the City. The intersection and corridor improvements range from items such as smaller re-striping of intersection approaches to modifying the lane usage and modifications to traffic signals to more significant street widening and new traffic signal construction and installations. Iteris worked closely with City staff in identifying the need and consistency with the circulation network, analyzing the results, and verifying the needed improvements. The final list of improvements was reviewed and approved by City staff. **Figure 2** shows the locations of the intersections and roadway segments for which improvements are recommended in the impact program.

Table 8 summarizes the list of intersection improvements that are recommended as part of this impact fee program.

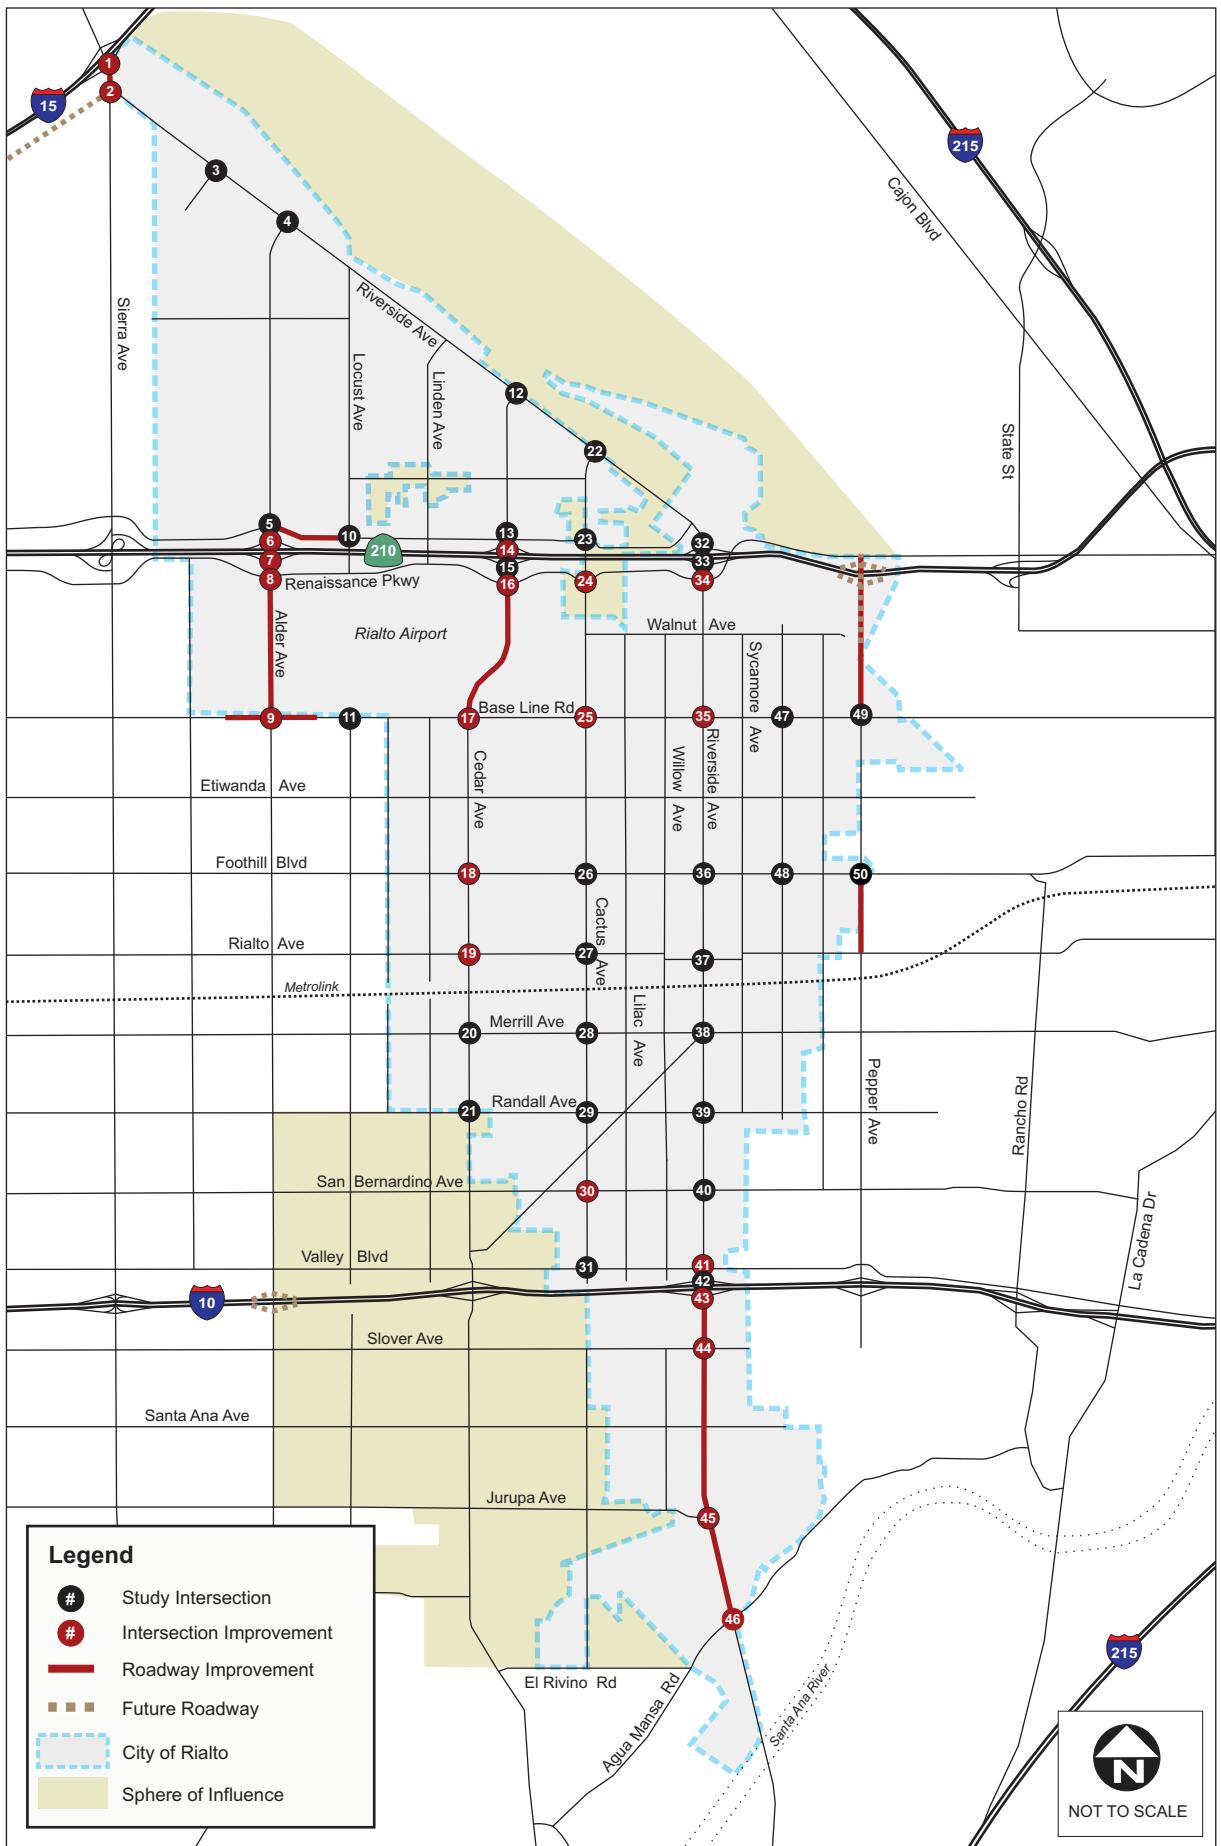

TABLE 8: INTERSECTION IMPROVEMENT PROJECT LIST

Intersection		Improvement
1	Sierra Ave/I-15 NB Ramps	Install a traffic signal and some civil improvements. No civil improvements in City of Fontana ROW
2	Sierra Ave/Riverside Ave	Install a traffic signal. Add a dedicated WB right-turn lane.
6	Alder Ave/SR-210 WB Ramps	Add a 2nd NB left-turn lane by re-striping the #1 through lane. Add 3rd lane on WB on-ramp (1 lane must be HOV)
7	Alder Ave/SR-210 EB Ramps	Addition of dedicated NB right-turn lane
8	Alder Ave/Renaissance Pkwy	Add a 2nd SB left-turn lane and Re-stripe the SB right-turn lane to a shared through/right-turn lane.
9	Alder Ave/Base Line Rd*	Add a 2nd EB through lane with a dedicated right-turn lane. Add a 2nd WB through lane with a dedicated right-turn lane.
14	Ayala Ave/SR-210 WB Ramps	Widen the SB approach to add a dedicated right-turn lane
16	Ayala Ave/Renaissance Pkwy/Easton	Add a 2nd EB left-turn lane.
17	Ayala Ave/Base Line Rd	Re-stripe the NB right-turn lane to a shared through/right-turn lane. Add a 2nd EB left-turn lane
18	Cedar Ave/Foothill Blvd	Add a 2nd NB left-turn lane. Add a 2nd SB left-turn lane.
19	Cedar Ave/Rialto Ave	Add a dedicated NB right-turn lane.
24	Cactus Ave/Easton	Install a traffic signal. A precise HCM-based LOS is not available due to number of lanes.
25	Cactus Ave/Base Line Rd	Add a 2nd NB left-turn lane. Add a dedicated NB right-turn lane. Add a 2nd EB left-turn lane. Add a 2nd WB left-turn lane. Add a dedicated WB right-turn lane.
30	Cactus Ave/San Bernardino Ave	Install a traffic signal. A precise HCM-based LOS is not available due to number of lanes.
34	Riverside Ave/Easton	Modify traffic signal to include a WB right-turn overlap phase.
35	Riverside Ave/Base Line Rd	Add a dedicated EB right-turn lane
41	Riverside Ave/Valley Blvd	Add a 2nd WB left-turn lane. Restripe the number two EB through lane to a shared through/right- turn lane

Intersection		Improvement
43	Riverside Ave/I-10 EB Ramps	Add a dedicated NB right-turn lane. Add a 3rd SB through lane.
44	Riverside Ave/Slover Ave	Add a 3rd NB through lane and a 3rd SB through lane
45	Riverside Ave/Jurupa Ave	Add a 3rd SB through lane
46	Riverside Ave/Agua Mansa Rd	Add a 3rd SB through lane. Add a 2nd EB through lane and a 2nd WB through lane by re-striping the dedicated right-turn lanes into shared through/right-turn lanes. Add a 2nd EB left-turn lane and a 2nd WB left-turn lane.

* Intersection identified as having an existing deficiency, thus the cost applied to the fee will reflect a "fair share" percentage of the total improvement cost.

Table 9 summarizes the list of required roadway improvements.

TABLE 9: ROADWAY SEGMENT IMPROVEMENT PROJECT LIST

Roadway Segment	Improvement
Casmalia St between Alder and Locust	Widen from 2 lane undivided to 4 lane divided
Pepper Ave between Foothill Blvd and Rialto Ave	Widen from 2 lane undivided to 4 lane divided
Base Line Rd between Tamarind Ave and Laurel Ave	Widen from 2-3 lane divided roadway to 4 lane divided
Riverside Ave between I-10 EB Ramps and Agua Mansa Rd	Widen from 4-5 lane roadway to 6 lane roadway.
Pepper Ave between Base Line Rd and Highland Ave	Widen from 2 lane undivided roadway to 4 lane divided roadway.
Sierra Ave between I-15 NB Ramps and Riverside Ave*	Widen from 4-lane divided to 6-lane divided
Alder Ave between Renaissance Pkwy and Base Line Rd*	Widen from 2 lane undivided to 4 lane divided
Ayala Ave between Renaissance Pkwy and Base Line Rd*	Widen from 3 lane undivided to 4 lane divided

* Segment identified as having an existing deficiency, thus the cost applied to the fee will reflect a "fair share" percentage of the total improvement cost.

As mentioned, improvements identified in this traffic impact fee study were developed in consultation with City staff. All improvement recommendations were developed as a result of traffic impacts caused by or worsened by new development. However, improvements were not recommended at all the impacted locations, for various reasons. Some potential recommendations were determined to not be feasible, while others were not considered to be consistent with the surrounding circulation network. While the traffic analysis has defined a list of deficiencies based on nexus requirements, the City has option to include less than what is actually required in the fee program.

7.0 PROJECT COST ESTIMATES

This section describes the methodology used to estimate the total cost of the intersection and roadway improvement projects described in Section 6. The improvement costs were reviewed and approved by City staff. It should be noted that the cost estimates are intended to be “planning level” estimates consistent with the intent of estimated long-range improvement costs, including appropriate levels of contingency and soft costs, which are calculated prior to availability of design details or documents related to these improvements.

7.1 INTERSECTION IMPROVEMENT COST ESTIMATES

The total intersection improvement costs are summarized in **Table 10**. These costs included construction, design, and right-of-way (if necessary). A detailed breakdown illustrating the details of the cost elements at each intersection is provided in **Appendix D**.

TABLE 10: INTERSECTION IMPROVEMENT PROJECT COSTS

Intersection		Initial Cost Estimate	Reduction due to SANBAG funding (60% reimbursed)	Final Cost Estimate
1	Sierra Ave/I-15 NB Ramps	\$440,400	\$0	\$440,400
2	Sierra Ave/Riverside Ave	\$532,800	\$0	\$532,800
6	Alder Ave/SR-210 WB Ramps	\$127,800	\$0	\$127,800
7	Alder Ave/SR-210 EB Ramps	\$300,000	\$0	\$300,000
8	Alder Ave/Renaissance Pkwy	\$337,200	\$0	\$337,200
9	Alder Ave/Base Line Rd*	\$293,263	\$0	\$293,263
14	Ayala Ave/SR-210 WB Ramps	\$169,200	\$0	\$169,200
16	Ayala Ave/Renaissance Pkwy	\$236,400	\$0	\$236,400
17	Ayala Ave/Base Line Rd	\$270,000	\$0	\$270,000
18	Cedar Ave/Foothill Blvd	\$669,600	\$0	\$669,600
19	Cedar Ave/Rialto Ave	\$162,000	\$0	\$162,000
24	Cactus Ave/Easton St	\$360,000	\$0	\$360,000
25	Cactus Ave/Base Line Rd	\$1,376,400	\$0	\$1,376,400
30	Cactus Ave/San Bernardino Ave	\$370,800	\$0	\$370,800
34	Riverside Ave/Easton St	\$14,400	\$0	\$14,400
35	Riverside Ave/Base Line Rd	\$300,000	\$0	\$300,000
41	Riverside Ave/Valley Blvd	\$561,600	\$0	\$561,600
43	Riverside Ave/I-10 EB Ramps	\$20,191,700	\$0	\$20,191,700
44	Riverside Ave/Slover Ave	\$355,200	\$0	\$355,200
45	Riverside Ave/Jurupa Ave	\$122,400	\$0	\$122,400

Intersection		Initial Cost Estimate	Reduction due to SANBAG funding (60% reimbursed)	Final Cost Estimate
46	Riverside Ave/Aqua Mansa Rd	\$616,800	-\$410,200	\$206,600
Total		\$27,807,963	-\$410,200	\$27,397,763

* Intersection identified as having an existing deficiency, thus the cost applied to the fee (as shown) reflects a "fair share" percentage of the total improvement cost.

As shown in **Table 10**, the total cost of intersection improvements is estimated to be \$27,397,763.

As mentioned in Section 4, the Alder Avenue/Base Line Road intersection is currently operating deficiently. The traffic impact fee is not intended to fully collect funds to improve existing deficiencies. At this intersection, only a portion of the overall improvement costs were applied towards the fee calculation, reflecting the portion that would be due to future growth. This portion, also known as a fair share percentage, was calculated by dividing the net new trips expected to be generated by new development by the total future trips at each intersection. The fair share calculations are provided in **Appendix E**.

7.2 CORRIDOR IMPROVEMENT COST ESTIMATES

The total corridor improvement costs are summarized in **Table 11**. These costs included construction, design, and right-of-way (if necessary). A detailed breakdown illustrating the details of the cost elements at each segment is provided in **Appendix D**.

TABLE 11: ROADWAY SEGMENT IMPROVEMENT PROJECT COSTS

Roadway Segment	Initial Cost Estimate	Reduction due to SANBAG funding (60% reimbursed)	Final Cost Estimate
Casmalia St between Alder and Locust	\$2,745,000	-\$1,207,200	\$1,537,800
Pepper Ave between Foothill Blvd and Rialto Ave	\$5,657,325	\$0	\$5,657,325
Base Line Rd between Tamarind Ave and Laurel Ave	\$6,103,080	-\$900,000	\$5,203,080
Riverside Ave between I-10 EB Ramps and Agua Mansa Rd	\$40,429,920	-\$15,000,000 ¹	\$25,429,920
Pepper Ave between Base Line Rd and Highland Ave	\$2,029,400	\$0	\$2,029,400
Sierra Ave between I-15 NB Ramps and Riverside Ave	\$996,950	\$0	\$996,950
Alder Ave between Renaissance Pkwy and Base Line Rd	\$2,409,075*	\$0	\$2,409,075*
Ayala Ave between Renaissance Pkwy and Base Line Rd	\$630,355*	\$0	\$630,355*
Total			\$43,893,905

* Segment identified as having an existing deficiency, thus the cost applied to the fee (as shown) reflects a "fair share" percentage of the total improvement cost.

1 = Cost of overpass widening removed from impact fee costs. To be paid by other sources.

Table 12 summarizes the final cost calculations, considering both the intersection and segment improvement costs.

TABLE 12: TOTAL TRANSPORTATION IMPROVEMENT COSTS

Category	Cost
Intersection Improvements (including Design costs)	\$27,397,763
Corridor Improvements (including Design costs)	\$43,893,905
City Administration Fee ¹	\$1,425,833.37
5-year Fee Updates ²	\$30,000
TOTAL	\$72,747,502

1 = 2% of total improvement costs.

2 = Assumes a total of 3 impact fee updates (every 5 years) at a cost of \$10,000 per update

The total transportation improvement costs include estimates for administration and five-year updates of the fees:

- City Administration Fee – This fee covers annual tasks related to City Council action for Engineering News Record (ENR) construction cost increases, improvement project prioritization and budgeting, and public education. A fee of 2% of the total cost of improvements is assumed.
- 5-year Fee Update – This fee includes staff and consultant time to validate new construction, update land use data for zoning and General Plan changes, rerun the model, prepare reports, and prepare Council action if necessary. The 5-year Update would occur three times during the 15-year period. Each update would cost \$10,000, totaling \$30,000 over a 20-year period.

8.0 TRAFFIC IMPACT FEE CALCULATION

The Traffic Impact Fee was calculated by dividing the total costs of the intersection and roadway improvements, as calculated, by the expected net daily trips forecast to be generated from new development within the City by buildout of the General Plan land. The final maximum traffic impact fee, assuming the net transportation improvement cost of \$72,747,502 required as a result of the 201,369 new daily trips forecast in the buildout scenario (upon removing trips generated by exempt land uses), is \$361.27 per daily trip. This calculation assumes that all “trips” are expected to equally contribute to the need for the intersection improvements, regardless of the land use types that generate the trips. The fees to be collected as a result of this updated traffic impact fee nexus study are supplementary to the specific fees and conditional upon individual development projects by the City. All requirements of the Mitigation Fee Act in California Government Code Section 66001 have been met by this nexus study. The traffic impact fee would be collected at the time of building permit issuance.

8.1 FEE SCHEDULE

Using the traffic impact fee per daily trip, maximum fees for specific land uses were derived. Fees are calculated for the five major land use categories using daily trip generation rates contained in the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (9th Edition). **Table 13** summarizes the maximum traffic impact fee per dwelling unit (residential) or square foot (non-residential) for the major land use categories in the City.

TABLE 13: TRAFFIC IMPACT FEE SCHEDULE PER LAND USE CATEGORIES

Land Use	Daily Trip Rate ¹	Maximum Traffic Impact Fee per Daily Trip	Maximum Traffic Impact Fee
Single-Family Residential	9.57 trips per dwelling unit	\$361.27	\$3,457/du
Multi-Family Residential	6.65 trip per dwelling unit	\$361.27	\$2,402/du
Retail	0.02925 trips per square foot ²	\$361.27	\$10.57/sf
Office	0.01100 trips per square foot	\$361.27	\$3.97/sf
Industrial	0.00697 trips per square foot	\$361.27	\$2.52/sf

1 = Institute of Transportation Engineers (ITE) Trip Generation, 9th Edition

2 = Daily trip rate reduced to account for removal of 34% typical pass-by trips

The impact fees shown in **Table 13** are the maximum traffic impact fees that can be legally administered by the City, in order to fund the improvements identified in this fee study. The City Council could opt to set the fees lower than these levels, but could not set the fees higher than these levels.

8.2 COST INCREASES OVER TIME

The cost estimates used to calculate the traffic impact fee were based on 2015 dollars and unit costs applied recently in other cities. In order for the traffic impact fee to stay current with changing construction and land costs, the City of Rialto has the authority to apply an inflation adjustment to the fee. Construction costs may be revised periodically to reflect changes in the Construction Cost Index published by the ENR.

9.0 COMPARISON WITH OTHER JURISDICTIONS

The traffic impact fees in similar jurisdictions within San Bernardino County, for the major land use categories, were reviewed in order to provide a comparison to the proposed City of Rialto traffic impact fees. **Table 14** summarizes the fees in other jurisdictions, where available.

TABLE 14: TRAFFIC IMPACT FEE COMPARISON

Jurisdiction	Traffic Impact Fee Per Development Type				
	Single-Family Residential (per du)	Multi-Family Residential (per du)	Retail/Commercial (per sq ft)	Office (per sq ft)	Industrial (per sq ft)
Rialto (<i>proposed max</i>)	\$3,457	\$2,402	\$10.57	\$3.97	\$2.52
Fontana	\$5,734	\$3,509	\$8.61	\$6.96	\$3.51
Rancho Cucamonga	\$9,002	\$5,401	\$13.50	\$10.80	\$5.40
SB County (Rialto Sphere)	\$7,895	\$5,486	\$17.02	\$10.90	\$6.01

As shown in **Table 14**, fees vary between jurisdictions. The proposed maximum City of Rialto fees are generally lower than fees imposed in Fontana and Rancho Cucamonga. Fees within the unincorporated San Bernardino County area adjacent to the City of Rialto (i.e. Rialto Sphere) are considerably higher than the proposed maximum Rialto fees.

10.0 MITIGATION FEE ACT FINDINGS

Development impact fees were enacted under Assembly Bill 1600 by the California Legislature in 1987 and codified under California Government Code Section 66000 et seq., also referred to as the Mitigation Fee Act (the “Act” or “AB 1600”), and are one authorized method of financing the public facilities necessary to mitigate the effects of new development. The Act requires that all public agencies satisfy the following requirements when establishing, increasing, or imposing a fee as a condition of new development:

A. Identify the Purpose of the Fee (Government Code Section 66001(A)(1))

The purpose of the impact fee is to finance the public transportation improvements needed to mitigate the traffic impacts of future development. These improvements and traffic impacts of future development are quantified in a Transportation/Traffic Impact Fee Nexus Study prepared by Iteris.

Based on the traffic model prepared by Iteris in connection with the Transportation/Traffic Impact Fee Nexus Study, the average daily number of trips within the City is forecast to increase

by 201,369 by 2040 (i.e., from 323,311 daily trips in 2012 to 524,680 daily trips in 2040). This figure (201,369) represents approximately 62% growth in daily trips over a 28-year time period. This growth in daily trips will create a demand for additional transportation improvements and facilities that existing facilities cannot accommodate. In order to accommodate new development in an orderly manner, while maintaining the current level of service in the City, the transportation improvements on the Project List will need to be constructed.

It is projected that the direct and cumulative effect of future development has required the preparation of this Transportation/Traffic Impact Fee Nexus Study. Each new development either creates a direct impact on the City's transportation system and/or contributes to the cumulative impact on the transportation system over time. Generally, without future development, the improvements on the Project List would not be necessary, as the existing facilities are adequate for the City's present population.

B. Identify the Use to which the Fee is to be Put (Government Code Section 66001(A)(2))

The impact fee will be used for and provide a source of revenue to the City for the design, acquisition, installation, and construction of the roadway, intersection, corridor, and other improvements identified on the Project List to mitigate the direct and cumulative impact of new development. These Improvements will in turn preserve the quality of life in the City and protect the health, safety, and welfare of future residents and employees.

C. Determine that there is a Reasonable Relationship between the Fee's Use and the Type of Development Project upon which the Fee is Imposed ("Benefit Relationship") (Government Code Section 66001(A)(3))

As discussed in Section A above, the projected direct and cumulative effects of future development have prompted the City to update its impact fee program. Each new development (including both "in fill" and "greenfield" projects) will contribute to the need for new transportation improvements. Generally, without future development, the City would have no need to acquire, construct, and/or install additional transportation facilities on the Project List. Even "in fill" development projects located adjacent to existing facilities will utilize and benefit from public facilities on the Project List. However, as part of the proposed impact fee, new development will be charged a "fair share" of the costs of certain improvements that are needed to accommodate the needs of existing as well as future development. The fair-share percentage is calculated by taking the ratio of trips for future development to the total trips for the facility in question (i.e., at an intersection or for a roadway segment with peak hour trips used for intersections and average daily trips (ADT) used for roadway segments) and multiplying it by the total improvement cost. There are three roadway segments and one intersection that fit the criteria of applying fair-share costs.

As set forth in this Transportation/Traffic Impact Fee Nexus Study, the development impact fees will be expended for the design, acquisition, installation, and construction of the transportation improvements identified on the Project List, as that is the purpose for which the development impact fees are collected. As previously stated, all new development creates either a direct

impact on or contributes to the cumulative impact of new development on the City's transportation system.

For the foregoing reasons, there is a reasonable relationship between the design, acquisition, construction, and installation of the transportation facilities on the Project List and new development as required under Section 66001(a)(3) of the Mitigation Fee Act.

D. Determine that there is a Reasonable Relationship between the Need for the Public Facility and the Type of Development Project upon which the Fee is Imposed ("Impact Relationship") (Government Code Section 66001(A)(4))

As previously stated, all new development within the City, irrespective of location, contributes to the direct and cumulative impact of development on the City's transportation system and creates a need for new transportation infrastructure to accommodate growth. With the exception noted above, the improvements identified on the Project List would not be necessary without future development. These improvements are needed to mitigate the effects of new development and maintain an adequate level of service for the community.

For the reasons presented herein, there is a reasonable relationship between the need for the transportation facilities included on the Project List and all new development within the City as required under Section 66001(a)(4) of the Mitigation Fee Act.

E. Discuss how there is a Reasonable Relationship between the Amount of the Fee and the Cost of the Public Facilities Attributable to the Development upon which the Fee is Imposed ("Rough Proportionality Relationship") (Government Code 66001(A))

As set forth above, all new development in the City impacts the transportation system. Moreover, each individual development project and its related increase in population and employment and corresponding increase in traffic, along with the cumulative impacts of all development in the City, will adversely impact, directly and cumulatively, existing facilities.

The method utilized in calculating impact fees for different types of development, which employs Institute of Transportation Engineers (ITE) trip rates, results in a reasonable proportionality relationship between the amount of the fee and the facility cost attributable to the new development project on which the fee is imposed. More specifically, the maximum traffic impact fee per daily trip, generated by the traffic model prepared by Iteris, is applied to five major land use categories (Single-Family Residential, Multi-Family Residential, Retail, Office, and Industrial) to determine a maximum fee per dwelling unit or building square foot. Note that for Retail, the trip rate is reduced to account for pass-by trips (i.e., roughly 34% of Retail trips as estimated by the ITE).

Thus, the proposed fee amounts are roughly proportional to the impact resulting from new development, and there is a reasonable relationship between the amount of the fee and the portion of cost of the facilities attributable to new development.

APPENDIX A:

MITIGATION FEE ACT

GOVERNMENT CODE

SECTION 66000-66008

66000. As used in this chapter, the following terms have the following meanings:

- (a) "Development project" means any project undertaken for the purpose of development. "Development project" includes a project involving the issuance of a permit for construction or reconstruction, but not a permit to operate.
- (b) "Fee" means a monetary exaction other than a tax or special assessment, whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, but does not include fees specified in Section 66477, fees for processing applications for governmental regulatory actions or approvals, fees collected under development agreements adopted pursuant to Article 2.5 (commencing with Section 65864) of Chapter 4, or fees collected pursuant to agreements with redevelopment agencies that provide for the redevelopment of property in furtherance or for the benefit of a redevelopment project for which a redevelopment plan has been adopted pursuant to the Community Redevelopment Law (Part 1 (commencing with Section 33000) of Division 24 of the Health and Safety Code).
- (c) "Local agency" means a county, city, whether general law or chartered, city and county, school district, special district, authority, agency, any other municipal public corporation or district, or other political subdivision of the state.
- (d) "Public facilities" includes public improvements, public services, and community amenities.

66000.5. (a) This chapter, Chapter 6 (commencing with Section 66010), Chapter 7 (commencing with Section 66012), Chapter 8 (commencing with Section 66016), and Chapter 9 (commencing with Section 66020) shall be known and may be cited as the Mitigation Fee Act.

(b) Any action brought in the superior court relating to the Mitigation Fee Act may be subject to a mediation proceeding conducted pursuant to Chapter 9.3 (commencing with Section 66030).

66001. (a) In any action establishing, increasing, or imposing a fee as a condition of approval of a development project by a local agency, the local agency shall do all of the following:

- (1) Identify the purpose of the fee.
- (2) Identify the use to which the fee is to be put. If the use is financing public facilities, the facilities shall be identified. That identification may, but need not, be made by reference to a capital

improvement plan as specified in Section 65403 or 66002, may be made in applicable general or specific plan requirements, or may be made in other public documents that identify the public facilities for which the fee is charged.

(3) Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed.

(4) Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed.

(b) In any action imposing a fee as a condition of approval of a development project by a local agency, the local agency shall determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed.

(c) Upon receipt of a fee subject to this section, the local agency shall deposit, invest, account for, and expend the fees pursuant to Section 66006.

(d) (1) For the fifth fiscal year following the first deposit into the account or fund, and every five years thereafter, the local agency shall make all of the following findings with respect to that portion of the account or fund remaining unexpended, whether committed or uncommitted:

(A) Identify the purpose to which the fee is to be put.

(B) Demonstrate a reasonable relationship between the fee and the purpose for which it is charged.

(C) Identify all sources and amounts of funding anticipated to complete financing in incomplete improvements identified in paragraph (2) of subdivision (a).

(D) Designate the approximate dates on which the funding referred to in subparagraph (C) is expected to be deposited into the appropriate account or fund.

(2) When findings are required by this subdivision, they shall be made in connection with the public information required by subdivision (b) of Section 66006. The findings required by this subdivision need only be made for moneys in possession of the local agency, and need not be made with respect to letters of credit, bonds, or other instruments taken to secure payment of the fee at a future date. If the findings are not made as required by this subdivision, the local agency shall refund the moneys in the account or fund as provided in subdivision (e).

(e) Except as provided in subdivision (f), when sufficient funds have been collected, as determined pursuant to subparagraph (F) of paragraph (1) of subdivision (b) of Section 66006, to complete financing on incomplete public improvements identified in paragraph (2) of subdivision (a), and the public improvements remain incomplete, the local agency shall identify, within 180 days of the determination that sufficient funds have been collected, an approximate date by which the construction of the public improvement will be commenced, or shall refund to the then current record owner or owners of the lots or units, as identified on the last equalized assessment roll, of the development project or projects on a prorated basis, the unexpended portion of the fee, and any interest accrued thereon. By means consistent with the intent of this section, a local agency may refund the unexpended revenues by direct payment, by providing a temporary suspension of fees, or by any other reasonable

means. The determination by the governing body of the local agency of the means by which those revenues are to be refunded is a legislative act.

(f) If the administrative costs of refunding unexpended revenues pursuant to subdivision (e) exceed the amount to be refunded, the local agency, after a public hearing, notice of which has been published pursuant to Section 6061 and posted in three prominent places within the area of the development project, may determine that the revenues shall be allocated for some other purpose for which fees are collected subject to this chapter and which serves the project on which the fee was originally imposed.

(g) A fee shall not include the costs attributable to existing deficiencies in public facilities, but may include the costs attributable to the increased demand for public facilities reasonably related to the development project in order to (1) refurbish existing facilities to maintain the existing level of service or (2) achieve an adopted level of service that is consistent with the general plan.

66002. (a) Any local agency which levies a fee subject to Section 66001 may adopt a capital improvement plan, which shall indicate the approximate location, size, time of availability, and estimates of cost for all facilities or improvements to be financed with the fees.

(b) The capital improvement plan shall be adopted by, and shall be annually updated by, a resolution of the governing body of the local agency adopted at a noticed public hearing. Notice of the hearing shall be given pursuant to Section 65090. In addition, mailed notice shall be given to any city or county which may be significantly affected by the capital improvement plan. This notice shall be given no later than the date the local agency notices the public hearing pursuant to Section 65090. The information in the notice shall be not less than the information contained in the notice of public hearing and shall be given by first-class mail or personal delivery.

(c) "Facility" or "improvement," as used in this section, means any of the following:

(1) Public buildings, including schools and related facilities; provided that school facilities shall not be included if Senate Bill 97 of the 1987-88 Regular Session is enacted and becomes effective on or before January 1, 1988.

(2) Facilities for the storage, treatment, and distribution of nonagricultural water.

(3) Facilities for the collection, treatment, reclamation, and disposal of sewage.

(4) Facilities for the collection and disposal of storm waters and for flood control purposes.

(5) Facilities for the generation of electricity and the distribution of gas and electricity.

(6) Transportation and transit facilities, including but not limited to streets and supporting improvements, roads, overpasses, bridges, harbors, ports, airports, and related facilities.

(7) Parks and recreation facilities.

(8) Any other capital project identified in the capital facilities plan adopted pursuant to Section 66002.

66003. Sections 66001 and 66002 do not apply to a fee imposed pursuant to a reimbursement agreement by and between a local agency and a property owner or developer for that portion of the cost of a public facility paid by the property owner or developer which exceeds the need for the public facility attributable to and reasonably related to the development. This chapter shall become operative on January 1, 1989.

66004. The establishment or increase of any fee pursuant to this chapter shall be subject to the requirements of Section 66018.

66005. (a) When a local agency imposes any fee or exaction as a condition of approval of a proposed development, as defined by Section 65927, or development project, those fees or exactions shall not exceed the estimated reasonable cost of providing the service or facility for which the fee or exaction is imposed.

(b) This section does not apply to fees or monetary exactions expressly authorized to be imposed under Sections 66475.1 and 66477.

(c) It is the intent of the Legislature in adding this section to codify existing constitutional and decisional law with respect to the imposition of development fees and monetary exactions on developments by local agencies. This section is declaratory of existing law and shall not be construed or interpreted as creating new law or as modifying or changing existing law.

66005.1. (a) When a local agency imposes a fee on a housing development pursuant to Section 66001 for the purpose of mitigating vehicular traffic impacts, if that housing development satisfies all of the following characteristics, the fee, or the portion thereof relating to vehicular traffic impacts, shall be set at a rate that reflects a lower rate of automobile trip generation associated with such housing developments in comparison with housing developments without these characteristics, unless the local agency adopts findings after a public hearing establishing that the housing development, even with these characteristics, would not generate fewer automobile trips than a housing development without those characteristics:

(1) The housing development is located within one-half mile of a transit station and there is direct access between the housing development and the transit station along a barrier-free walkable pathway not exceeding one-half mile in length.

(2) Convenience retail uses, including a store that sells food, are located within one-half mile of the housing development.

(3) The housing development provides either the minimum number of parking spaces required by the local ordinance, or no more than one onsite parking space for zero to two bedroom units, and two onsite parking spaces for three or more bedroom units, whichever is less.

(b) If a housing development does not satisfy the characteristics in subdivision (a), the local agency may charge a fee that is proportional to the estimated rate of automobile trip generation associated with the housing development.

(c) As used in this section, "housing development" means a development project with common ownership and financing consisting of residential use or mixed use where not less than 50 percent of the floorspace is for residential use.

(d) For the purposes of this section, "transit station" has the meaning set forth in paragraph (4) of subdivision (b) of Section 65460.1. "Transit station" includes planned transit stations otherwise meeting this definition whose construction is programmed to be completed prior to the scheduled completion and occupancy of the housing development.

(e) This section shall become operative on January 1, 2011.

66006. (a) If a local agency requires the payment of a fee specified in subdivision (c) in connection with the approval of a development project, the local agency receiving the fee shall deposit it with the other fees for the improvement in a separate capital facilities account or fund in a manner to avoid any commingling of the fees with other revenues and funds of the local agency, except for temporary investments, and expend those fees solely for the purpose for which the fee was collected. Any interest income earned by moneys in the capital facilities account or fund shall also be deposited in that account or fund and shall be expended only for the purpose for which the fee was originally collected.

(b) (1) For each separate account or fund established pursuant to subdivision (a), the local agency shall, within 180 days after the last day of each fiscal year, make available to the public the following information for the fiscal year:

(A) A brief description of the type of fee in the account or fund.
(B) The amount of the fee.

(C) The beginning and ending balance of the account or fund.

(D) The amount of the fees collected and the interest earned.

(E) An identification of each public improvement on which fees were expended and the amount of the expenditures on each improvement, including the total percentage of the cost of the public improvement that was funded with fees.

(F) An identification of an approximate date by which the construction of the public improvement will commence if the local agency determines that sufficient funds have been collected to complete financing on an incomplete public improvement, as identified in paragraph (2) of subdivision (a) of Section 66001, and the public improvement remains incomplete.

(G) A description of each interfund transfer or loan made from the account or fund, including the public improvement on which the transferred or loaned fees will be expended, and, in the case of an interfund loan, the date on which the loan will be repaid, and the rate of interest that the account or fund will receive on the loan.

(H) The amount of refunds made pursuant to subdivision (e) of Section 66001 and any allocations pursuant to subdivision (f) of Section 66001.

(2) The local agency shall review the information made available to the public pursuant to paragraph (1) at the next regularly scheduled public meeting not less than 15 days after this information is made available to the public, as required by this subdivision. Notice of the time and place of the meeting, including the address

where this information may be reviewed, shall be mailed, at least 15 days prior to the meeting, to any interested party who files a written request with the local agency for mailed notice of the meeting. Any written request for mailed notices shall be valid for one year from the date on which it is filed unless a renewal request is filed. Renewal requests for mailed notices shall be filed on or before April 1 of each year. The legislative body may establish a reasonable annual charge for sending notices based on the estimated cost of providing the service.

(c) For purposes of this section, "fee" means any fee imposed to provide for an improvement to be constructed to serve a development project, or which is a fee for public improvements within the meaning of subdivision (b) of Section 66000, and that is imposed by the local agency as a condition of approving the development project.

(d) Any person may request an audit of any local agency fee or charge that is subject to Section 66023, including fees or charges of school districts, in accordance with that section.

(e) The Legislature finds and declares that untimely or improper allocation of development fees hinders economic growth and is, therefore, a matter of statewide interest and concern. It is, therefore, the intent of the Legislature that this section shall supersede all conflicting local laws and shall apply in charter cities.

(f) At the time the local agency imposes a fee for public improvements on a specific development project, it shall identify the public improvement that the fee will be used to finance.

66006.5. (a) A city or county which imposes an assessment, fee, or charge, other than a tax, for transportation purposes may, by ordinance, prescribe conditions and procedures allowing real property which is needed by the city or county for local transportation purposes, or by the state for transportation projects which will not receive any federal funds, to be donated by the obligor in satisfaction or partial satisfaction of the assessment, fee, or charge.

(b) To facilitate the implementation of subdivision (a), the Department of Transportation shall do all of the following:

(1) Give priority to the refinement, modification, and enhancement of procedures and policies dealing with right-of-way donations in order to encourage and facilitate those donations.

(2) Reduce or simplify paperwork requirements involving right-of-way procurement.

(3) Increase communication and education efforts as a means to solicit and encourage voluntary right-of-way donations.

(4) Enhance communication and coordination with local public entities through agreements of understanding that address state acceptance of right-of-way donations.

66007. (a) Except as otherwise provided in subdivisions (b) and (g), any local agency that imposes any fees or charges on a residential development for the construction of public improvements or facilities shall not require the payment of those fees or charges, notwithstanding any other provision of law, until the date of the

final inspection, or the date the certificate of occupancy is issued, whichever occurs first. However, utility service fees may be collected at the time an application for utility service is received. If the residential development contains more than one dwelling, the local agency may determine whether the fees or charges shall be paid on a pro rata basis for each dwelling when it receives its final inspection or certificate of occupancy, whichever occurs first; on a pro rata basis when a certain percentage of the dwellings have received their final inspection or certificate of occupancy, whichever occurs first; or on a lump-sum basis when the first dwelling in the development receives its final inspection or certificate of occupancy, whichever occurs first.

(b) (1) Notwithstanding subdivision (a), the local agency may require the payment of those fees or charges at an earlier time if (A) the local agency determines that the fees or charges will be collected for public improvements or facilities for which an account has been established and funds appropriated and for which the local agency has adopted a proposed construction schedule or plan prior to final inspection or issuance of the certificate of occupancy or (B) the fees or charges are to reimburse the local agency for expenditures previously made. "Appropriated," as used in this subdivision, means authorization by the governing body of the local agency for which the fee is collected to make expenditures and incur obligations for specific purposes.

(2) (A) Paragraph (1) does not apply to units reserved for occupancy by lower income households included in a residential development proposed by a nonprofit housing developer in which at least 49 percent of the total units are reserved for occupancy by lower income households, as defined in Section 50079.5 of the Health and Safety Code, at an affordable rent, as defined in Section 50053 of the Health and Safety Code. In addition to the contract that may be required under subdivision (c), a city, county, or city and county may require the posting of a performance bond or a letter of credit from a federally insured, recognized depository institution to guarantee payment of any fees or charges that are subject to this paragraph. Fees and charges exempted from paragraph (1) under this paragraph shall become immediately due and payable when the residential development no longer meets the requirements of this paragraph.

(B) The exception provided in subparagraph (A) does not apply to fees and charges levied pursuant to Chapter 6 (commencing with Section 17620) of Part 10.5 of Division 1 of Title 1 of the Education Code.

(c) (1) If any fee or charge specified in subdivision (a) is not fully paid prior to issuance of a building permit for construction of any portion of the residential development encumbered thereby, the local agency issuing the building permit may require the property owner, or lessee if the lessee's interest appears of record, as a condition of issuance of the building permit, to execute a contract to pay the fee or charge, or applicable portion thereof, within the time specified in subdivision (a). If the fee or charge is prorated pursuant to subdivision (a), the obligation under the contract shall be similarly prorated.

(2) The obligation to pay the fee or charge shall inure to the benefit of, and be enforceable by, the local agency that imposed the fee or charge, regardless of whether it is a party to the contract. The contract shall contain a legal description of the property

affected, shall be recorded in the office of the county recorder of the county and, from the date of recordation, shall constitute a lien for the payment of the fee or charge, which shall be enforceable against successors in interest to the property owner or lessee at the time of issuance of the building permit. The contract shall be recorded in the grantor-grantee index in the name of the public agency issuing the building permit as grantee and in the name of the property owner or lessee as grantor. The local agency shall record a release of the obligation, containing a legal description of the property, in the event the obligation is paid in full, or a partial release in the event the fee or charge is prorated pursuant to subdivision (a).

(3) The contract may require the property owner or lessee to provide appropriate notification of the opening of any escrow for the sale of the property for which the building permit was issued and to provide in the escrow instructions that the fee or charge be paid to the local agency imposing the same from the sale proceeds in escrow prior to disbursing proceeds to the seller.

(d) This section applies only to fees collected by a local agency to fund the construction of public improvements or facilities. It does not apply to fees collected to cover the cost of code enforcement or inspection services, or to other fees collected to pay for the cost of enforcement of local ordinances or state law.

(e) "Final inspection" or "certificate of occupancy," as used in this section, have the same meaning as described in Sections 305 and 307 of the Uniform Building Code, International Conference of Building Officials, 1985 edition.

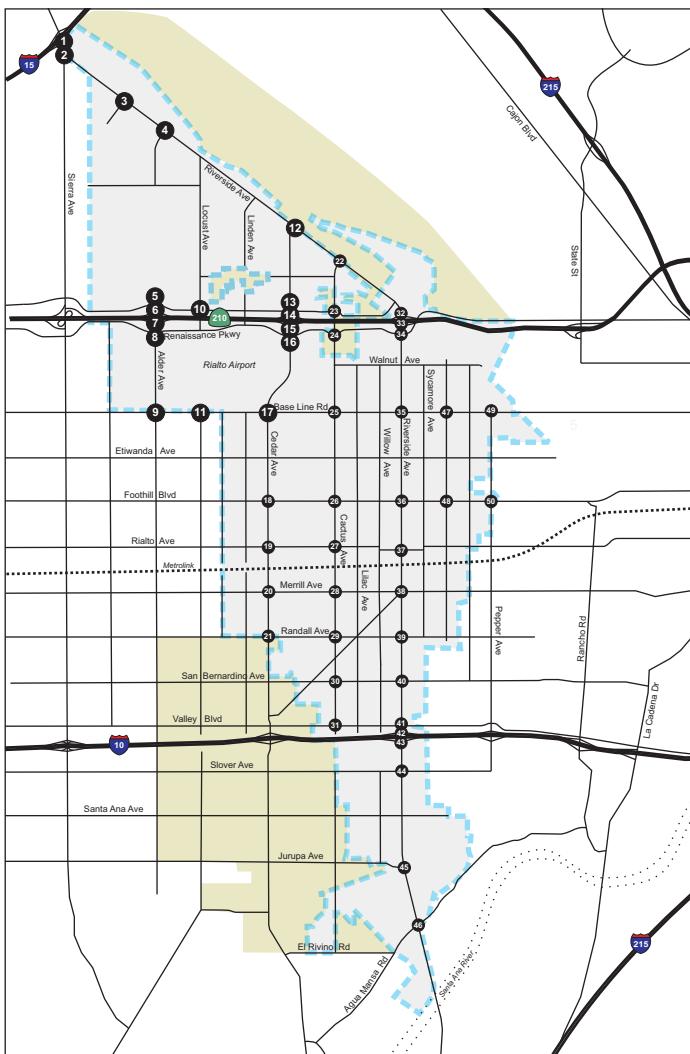

(f) Methods of complying with the requirement in subdivision (b) that a proposed construction schedule or plan be adopted, include, but are not limited to, (1) the adoption of the capital improvement plan described in Section 66002, or (2) the submittal of a five-year plan for construction and rehabilitation of school facilities pursuant to subdivision (c) of Section 17017.5 of the Education Code.

(g) A local agency may defer the collection of one or more fees up to the close of escrow. This subdivision shall not apply to fees and charges levied pursuant to Chapter 6 (commencing with Section 17620) of Part 10.5 of Division 1 of Title 1 of the Education Code.

66008. A local agency shall expend a fee for public improvements, as accounted for pursuant to Section 66006, solely and exclusively for the purpose or purposes, as identified in subdivision (f) of Section 66006, for which the fee was collected. The fee shall not be levied, collected, or imposed for general revenue purposes.

CITY OF RIALTO
Intersection Construction Cost Estimates

No.	# ON MAP	NAME	COSTs	DESIGN COST Est. 20% Const Est	Total Estimate	Improvement	Preliminary Right of Way (ROW) needed	Comments
1	1	Sierra Ave/I-15 NB Ramps	\$ 367,000	\$ 73,400	\$ 440,400	Install a traffic signal and some civil improvements. No civil improvements in City of Fontana ROW	No ROW take at intersection	
3	6	Alder Ave/SR-210 WB Ramps	\$ 106,500	\$ 21,300	\$ 127,800	Add a 2nd NB left-turn lane by re-striping the #1 through lane. At 3rd lane on WB on-ramp (1 lane must be HOV)	Re-stripe, so likely no ROW take	
4	7	Alder Ave/SR-210 EB Ramps	\$ 250,000	\$ 50,000	\$ 300,000	Addition of dedicated NB right-turn lane	No ROW take at intersection	Based on Hall & Foreman cost estimate
5	8	Alder Ave/Renaissance Pkwy	\$ 281,000	\$ 56,200	\$ 337,200	Add a 2nd SB left-turn lane and Re-stripe the SB right-turn lane to a shared through/right-turn lane.	SB approach: 12 ft ROW take	Estimate was based on actual, field condition. Improvement plans being developed by Dokken Engr do not include improvements to EB, WB approaches Right-of-Way related costs have been estimated as part of improvements for corridors (typical)
7	14	Ayala Ave/SR-210 WB Ramps	\$ 141,000	\$ 28,200	\$ 169,200	Widen the SB approach to add a dedicated right-turn lane	SB approach: 12 ft ROW take	Estimate was based on actual, field condition.
8	16	Ayala Ave/Renaissance Pkwy/Easton	\$ 197,000	\$ 39,400	\$ 236,400	Add a 2nd EB left-turn lane.	EB approach: 12 ft ROW take	Improvements per plan completed by Albert Webb dated June 2014 doesn't include the EB approach.
10	18	Cedar Ave/Foothill Blvd	\$ 558,000	\$ 111,600	\$ 669,600	Add a 2nd NB left-turn lane. Add a 2nd SB left-turn lane.	NB approach: 12 ft ROW take SB approach: 12 ft ROW take	
12	24	Cactus Ave/Easton	\$ 300,000	\$ 60,000	\$ 360,000	Install a traffic signal. A precise HCM-based LOS is not available due to number of lanes.		
14	30	Cactus Ave/San Bernardino Ave	\$ 309,000	\$ 61,800	\$ 370,800	Install a traffic signal. A precise HCM-based LOS is not available due to number of lanes.		
15	34	Riverside Ave/Easton	\$ 12,000	\$ 2,400	\$ 14,400	Modify traffic signal to include a WB right-turn overlap phase.	No ROW take at intersection	
16	35	Riverside Ave/Base Line Rd	\$ 250,000	\$ 50,000	\$ 300,000	Add a dedicated EB right-turn lane	EB approach: 12 ft ROW take	

No.	# ON MAP	NAME	COSTs	DESIGN COST Est. 20% Const Est	Total Estimate	Improvement	Preliminary Right of Way (ROW) needed	Comments
18	41	Riverside Ave/Valley Blvd	\$ 468,000	\$ 93,600	\$ 561,600	Add a 2nd WB left-turn lane. Restripe the number two EB through lane to a shared through/right-turn lane	WB approach: 12 ft ROW take EB approach: No ROW take at intersection	
19	43	Riverside Ave/I-10 EB Ramps	\$ 16,826,400	\$ 3,365,300	\$ 20,191,700	Add a dedicated NB right-turn lane. Add a 3rd SB through lane.	NB approach: widen bridge by 12 ft SB approach: widen bridge by 10 ft	Estimate was based on additional improvements on-top of prepared Exhibit by JL Patterson dated Aug 25, 2014.
