

June 5, 2019

Mr. Daniel Casey City of Rialto Planning Division 150 S. Palm Avenue Rialto, CA 92376

SUBJECT: Response to SCAQMD Comments on IS/MND for Riverside & Randall Gas Station Project

Dear Daniel:

This letter is in response to the City's request for Lilburn Corporation to provide a Response to Comment for South Coast Air Quality Management District's (SCAQMD) letter of June 5, 2019. The purpose of the response is to provide clarification to the Planning Commission subsequent to the Initial Study being circulated for public review.

The SCAQMD's submitted a comment letter on the Initial Study/Mitigated Negative Declaration (IS/MND) prepared for the Riverside & Randall Gas Station Project proposed to be located at the southwest corner of Riverside Avenue and Randall Avenue. The comments in the SCAQMD letter have been numbered to make reviewing the responses to specific comments easier for the reviewer (see attached letter). The numbered comments are summarized below followed by a response to each.

Comment 1: Upon review of the Air Quality Analysis section and CalEEMod modeling output files, South Coast AQMD staff found that the land use types in CalEEMod are inconsistent with the Proposed Project's description. The Proposed Project's description states that the Proposed Project includes a gasoline service station with 10-fuel dispenser fueling stations and a 5,460-square-foot fuel canopy, a 7,250-square-foot convenience store with a drive-thru, a 1,750-square-foot automated carwash, and a 1,800-square-foot restaurant with a drive-thru. In CalEEMod, the Lead Agency quantified construction and operational emissions for the restaurant and the convenience market with 20 gas pumps, but did not quantify emissions for the 5,460-squre-foot fuel canopy or the 7,250-square-foot convenience store with a drive-thru. These omissions may have led to an underestimation of the Proposed Project's construction and operational air quality impacts. Therefore, South Coast AQMD staff recommends that the Lead Agency clarify if the 5,460-square-foot fuel canopy and the 7,250-square-foot convenience store with a drive-thru were included in the CalEEMod modeling run. Alternatively, South Coast AQMD staff recommends that the Lead Agency

Mr. Daniel Casey June 5, 2019 Page 2

revise the Air Quality Analysis to quantify emissions from constructing and operating the fuel canopy and convenience store, and include these emissions for determining the level of significance for the Proposed Project's construction and operational air quality impacts in the Final MND.

Response 1: The Proposed Project includes a gasoline service station with a 10-fuel dispenser fueling station (20 pumps total, one on each side of each station) and a 5,460-square-foot fuel canopy (this is a roof over the proposed pumps, not an enclosed building), a 7,250-square-foot convenience store with a drive-thru (for prepared food pick-up), a 1,750-square-foot automated carwash, and a 1,800-square-foot restaurant with a drive-thru.

Using the CalEEMod model, the land uses selected were Convenience Market With Gas Pumps (20 Pumps were selected in lieu of using square-footage) and Fast Food Restaurant with a drive-thru (2,250 square feet). Each land use was selected to be consistent with the operational trips identified in the project's January 3, 2019 Traffic Impact Analysis (TIA). Refer to the attached TIA Project Trip Generation and the CalEEMod Trip Summary for additional information and to confirm consistency.

Upon a review of the Air Quality Analysis, it did not appear that the analysis Comment 2: included operational ROG emissions generated from storage tanks or from the fueling process during operation. This may have likely led to an underestimation of the Proposed Project's operational air quality impacts. Although South Coast AQMD Rule 461 - Gasoline Transfer and Dispensing requires the use of California Air Resources Board certified Phase I and Phase II enhanced vapor recovery systems with minimum volumetric efficiencies of 98% and 95%, respectively 15, ROG emissions are not entirely eliminated from the fueling process and should be taken into consideration when analyzing the Proposed Project's operational air quality impacts. As an informational document, the Final MND should, at a minimum, include a discussion on potential operational air quality impacts from the fueling process. The Lead Agency should use its best efforts to quantify and disclose ROG emissions from the fueling process in the Final MND. If there is no substantial evidence to support a quantitative analysis of ROG emissions from the fueling process, the Lead Agency should disclose the reasons supported by factual information in the Final MND. It is also important to note that while CalEEMod16 quantifies mobile source emissions (e.g., trip visits by patrons) associated with operating a gasoline service station, CalEEMod does not quantify the operational stationary source emissions from the storage tanks and fueling equipment.

Response 2: In the CalEEMod model, the land use for a Convenience Market with Gas Pumps was selected (20 Pumps). The cited emissions generated are in fact accounted for within the SCAQMD recommended CalEEMod model. In addition, a Health Risk Assessment (HRA) was prepared to address SCAQMD's request to prepare

focused HRAs for gasoline dispensing facilities. The analysis presented therein reflects a maximum annual throughout of approximately 3,500,000 gallons. This is preliminarily determined to be the approximate upper limit of gasoline throughput at which the respective fueling stations could operate while precluding potentially significant health risks. Ultimate fuel throughput allowances/requirements would be established by SCAQMD through the fueling station permitting processes noted below. No significant health risk impacts related to emissions were identified.

As indicated in the comment letter, the developer will be required to comply with the following rules/permits from SCAQMD prior to operational use. These include but are not limited to: Rule 461 – Gasoline Transfer and Dispensing, Rule 201 – Permit to Construct, Rule 203 – Permit to Operate, and Rule 1401 – New Source Review of Toxic Air Containments. Therefore, construction and operational impacts have been addressed in the CEQA document. The SCAQMD permitting process (as indicated) will further quantified emissions for purposes of approving/issuing permits.

Comment 3: In the event that, upon revisions to the Air Quality Analysis based on Comment Nos. 1 and 2, the Lead Agency finds that the Proposed Project would result in significant adverse air quality and health risks impacts from operation, mitigation would be required (CEQA Guidelines Section 15126.4.). Therefore, South Coast AQMD staff has compiled a list of recommended mitigation measures as suggested resources and guidance to the Lead Agency to assist in the identification of feasible mitigation measures for incorporation in the Final MND. For more information on potential mitigation measures as guidance to the Lead Agency, please visit South Coast AQMD's CEQA Air Quality Handbook website.

Mitigation Measures for Operational Air Quality Impacts from Mobile Sources

- Provide incentives for vendors and material delivery trucks that would be visiting the retail and restaurant operations to encourage the use of zero-emission or near-zero emission heavy-duty trucks during operation, such as trucks with natural gas engines that meet CARB's adopted optional NOx emissions standard of 0.02 grams per brake horsepower-hour (g/bhp-hr). At a minimum, incentivize the use of 2010 model year18 or newer engines that meet CARB's 2010 engine emission standards of 0.01 g/bhp-hr for particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include analyses to evaluate and identify sufficient power available for zero emission trucks and supportive infrastructures in the Energy and Utilities and Service Systems Sections of the Final MND, where appropriate.
- Provide electric vehicle (EV) charging stations for the retail and restaurant uses. Require at least 5% of all vehicle parking spaces include EV

charging stations, or at a minimum, require the Proposed Project to be constructed with the appropriate infrastructure to facilitate sufficient electric charging for passenger vehicles and trucks to plug-in. Electrical hookups should be provided at the onsite truck stop for truckers to plug in any onboard auxiliary equipment. Electrical panels should be appropriately sized to allow for future expanded use. The Lead Agency should also include analyses to evaluate and identify sufficient power available for zero emission trucks and supportive infrastructures (e.g., EV charging stations) in the Energy and Utilities and Service Systems Sections of the Final MND, where appropriate.

- Provide incentives for employees working at the proposed retail and restaurant uses to encourage the use of public transportation or carpooling, such as discounted transit passes or carpool rebates.
- Implement a rideshare program for employees working at the proposed retail and restaurant uses and set a goal to achieve a certain participation rate over a period of time.

Mitigation Measures for Operational Air Quality Impacts from Area Sources

- Maximize the use of solar energy including solar panels. Installing the maximum possible number of solar energy arrays on the building roofs and/or on the Proposed Project site to generate solar energy for the facility and/or EV charging stations.
- Require the use of electric landscaping equipment, such as lawn mowers and leaf blowers.
- Require use of electric or alternatively fueled sweepers with HEPA filters.
- Maximize the planting of trees in landscaping and parking lots.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.

Response 3: Comment noted. City will consider the referenced mitigation measures

Mr. Daniel Casey June 5, 2019 Page 5

If you should have any questions or require additional information, please do not hesitate to give us a call.

Sincerely,

Frank Amendola Project Manager
